

The Tobacco Stats:

Hispanic and Latinx American Edition

Hispanic and Latinx American adults who identify as **Puerto Rican** have consistently **reported the highest current smoking** compared to other subgroups, whereas **Dominican and Central or South American adults** have reported the **lowest**.

A recent published analysis found that in 2015, **56.2% of Hispanic and Latinx American smokers had made a quit attempt in the past year**. However, Hispanic and Latinx American smokers had **lower odds of receiving quitting advice** from a health professional compared to white smokers.

According to the 2019 National Youth Tobacco Survey, **3.8% of Hispanic and Latinx American high school students** currently use cigarettes compared to **5.8% of high schoolers overall**.
