

The Tobacco Stats: LGBTQ+ Edition

LGBTQ+ adults are **two times more likely to smoke cigarettes** than straight, cisgender adults.

Transgender youth between 14-17 reported **recent use of more than one tobacco product** at nearly **three times** the rate of cisgender youth.

LGBTQ+ smokers are significantly more likely to smoke menthol cigarettes: more than **36% of LGBTQ+ smokers** report that they **usually smoke menthols**, which are **easier to use and harder to quit**.
